**BUILT
FOR YOU LIKE**

SIMPLE. ACCURATE. EVERY LOAD.

The Cache Weigh System can be installed on any current piler set up. Cache allows for accurate weight measuring during the piling process and when loading trucks for delivery.

The mounted load cells of the Cache system are built to withstand the rigorous process of loading and unloading throughout the season. Visual feedback is always available with the Cache system's display and data is accessible via Wi-Fi connectivity. With the Cache Weigh System, commercial growers can confidently know how much they have on hand as well as how much they are loading onto trucks.

 HarvestMaster.
BY JUNIPER SYSTEMS

Simple upgrade

- Compatible with most existing piling systems
- Set it and forget it

Accurate weights

- Instant data through accurate calibrations
- Wireless monitoring

Every load

- Load with accuracy
- Avoid multiple trips
