

Mirus Calibration Wizards

Mirus software includes calibration wizards that guide the user through the calibration processes using step-by-step instructions along with video snip-its.

To enter the calibration process for WEIGHTS and SLOPE & MOTION:

Select **SETUP>DEVICE>CALIBRATION**. Follow the on-screen instructions and videos for optimum calibration accuracy.

To calibrate for moisture:

Select MOISTURE CURVES instead of CALIBRATION, then select the **+** for a new curve. Again, follow the instructions for optimum calibration accuracy.
